

The world's fastest framework for building websites

Powered by Hugo & [PaperMod](#). [Частоупотребимые веб-закладки](#). Вперед, в Интернет!

Fedora Linux

```
sudo dnf install -y git hugo
```

Альт Линух

```
apt-get install -y git hugo
```

```
mkdir $HOME/hugo && cd $HOME/hugo && hugo new site kibibyte-ru --format yaml
cd $HOME/hugo/kibibyte-ru
git init #
https://stackoverflow.com/questions/16853624/git-discovery-across-filesystem
-not-set
git submodule add --depth=1 https://github.com/adityatelange/hugo-
PaperMod.git themes/PaperMod
git submodule update --init --recursive # needed when you reclone your repo
(submodules may not get cloned automatically)
git submodule update --remote --merge
```

```
cd $HOME/hugo/kibibyte-ru
hugo
```

Обновление

Inside the folder of your Hugo site `MyFreshWebsite`, run:

```
git submodule update --remote --merge
```
